

“People want beauty products to be more ethical,” says research

Most British adults (79%) say personal care and beauty brands should put more effort into manufacturing their products in an ethical and sustainable way, according to new findings from [Sagentia](#).

The sentiment was shared by men and women, and was consistent across all age groups. However, female respondents felt significantly more strongly about the issue than men, with 85% versus 73% saying more effort should be made.

The company commissioned a poll of 2,029 Brits to find out what matters most when they're choosing personal care products such as body wash, cleansers, moisturiser or shaving gel.

Responses indicate that when people are buying personal care products, ethical and sustainability credentials (34%) are just as important as sensory characteristics, such as fragrance (31%). However, value for money (67%) and functional benefits, such as helping skin or hair problems (54%), are top priorities for most people.

Sagentia spokesperson Matt Herd says the findings show how the growing public discussion about climate change is moving mainstream. It's changing how people think about the products they use and what they expect from brands. He believes people want personal care and beauty products that they can feel good about using.

“According to our findings, most people agree that personal care and beauty brands have a responsibility to do more,” Herd explains. “However, younger people aged 18-24 seem more inclined to take practical steps in this vein. We found that 33% would like to personalise the way packaging is sourced, for instance to make it more environmentally friendly.”

Herd acknowledges that many leading personal care and beauty brands have published sustainability reports and objectives. However, he says the research findings indicate that people want to see practical evidence of change, rather than corporate statements.

“It's all very well having a company ethos that talks about sustainability, but it needs to filter down to the products too,” he says. “Packaging is one part of this. But it's also important to think about the ingredients used in personal care and beauty products – where do they

come from, how they are sourced. This is a complex issue, but consumers expect the brands they trust to tackle it head-on.”

Sagentia is a product and technology development consultancy which has worked with brands including Unilever and Nu Skin. It's part of the Science Group.

Notes to editors

All figures, unless otherwise stated, are from YouGov Plc. Total sample size was 2029 GB adults. Fieldwork was undertaken between 9th - 10th September 2019. The survey was carried out online. The figures have been weighted and are representative of all GB adults (aged 18+). For the purposes of the survey, 'personal care and beauty products' were classified as 'any products used on the skin, hair or body (e.g. body wash, cleansers, moisturisers, shaving gels etc.) excluding cosmetics (e.g. makeup, fake tan, etc.)'.

About Sagentia

Sagentia is a global science, product and technology development company. Our mission is to help companies maximise the value of their investments in R&D. We partner with clients in the medical, consumer, industrial and food & beverage sectors to help them understand the technology and market landscape, decide their future strategy, solve the complex science and technology challenges and deliver commercially successful products. Sagentia employs over 150 scientists, engineers and market experts and is a Science Group company. Science Group provides independent advisory and leading-edge product development services focused on science and technology initiatives. It has ten offices globally, two UK-based dedicated R&D innovation centres and more than 350 employees. Other Science Group companies include OTM Consulting, Oakland Innovation, Leatherhead Food Research and TSG Consulting.
