

PRESS RELEASE

Cancer imaging system scoops engineering awards

October 27th 2016: Lightpoint Medical claimed 'new electronic product of the year' and the coveted 'grand prix' at the British Engineering Excellence Awards for an imaging system developed in association with R&D specialist Sagentia.

The LightPath™ Imaging System helps surgeons to precisely locate cancer cells, ensuring diseased tissue can be cleared in a single operation. It is the first commercially available imaging device with this capability.

BEEA judges were looking for an electronic product or component that addresses a particular market need. The winning entry had to bring a significant performance improvement; either over a previous product or competitive devices. LightPath™ satisfied their exacting criteria by integrating the latest imaging technology with a mobile device that is suitable for use in busy operating theatres.

Alistair Fleming, Head of Surgical and Diagnostics at Sagentia, says: "The system detects Cerenkov Luminescence, a subtle light produced by PET imaging agents widely used in cancer diagnosis. The light is so faint that it is like trying to see a candle from 40 miles away, presenting significant challenges. We worked with Lightpoint from the very early days of the development and are delighted to congratulate them on this well-deserved success."

LightPath™ is now commercially available in Europe having obtained a CE Mark in October 2015.

About Sagentia

Sagentia is a global science, product and technology development company. Our mission is to help companies maximise the value of their investments in R&D. We partner with clients in the consumer, industrial, medical and oil & gas sectors to help them understand the technology and market landscape, decide their future strategy, solve the complex science and technology challenges and deliver commercially successful products.

Sagentia employs over 150 scientists, engineers and market experts and is a Science Group company. Science Group provides independent advisory and leading-edge product development services focused on science and technology initiatives. It has six offices globally, two UK-based

dedicated R&D innovation centres and more than 350 employees. Other Science Group companies include OTM Consulting, Oakland Innovation and Leatherhead Food Research.
