

SE Asia NOC

State-of-the-art review of green
power in offshore

- We carried out a high-level scan for activity across the industry using desk-based research.
- After consultation, the client chose one area per topic for an in-depth study covering:
 - Recent advances, developments, and performance
 - Current and future research
 - Industry capabilities assessment
 - Identification of potential gaps/ opportunities
- We produced a 'heat map' of activity, highlighting potential areas of interest for the client. The results of the in-depth topic studies identified suitable technologies for R&D investment based on the current industry offering and likely impact of R&D activity.
